### **DETAILED ACTION**

In view of the appeal brief filed on 3/17/2008 PROSECUTION IS HEREBY REOPENED. A first action Non-Final rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

/Akm Enayet Ullah/

Supervisory Patent Examiner, Art Unit 2838

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3 - 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heavey (U.S. 5,307,001).

**Regarding claims 1, and 5 - 15,** Heavey discloses a method for charging a battery having a control device that influences a charging current for the battery in a predefined manner and carries out at least two different charging methods, the method comprising:

in a first charging method, maintaining a substantially constant voltage (column 9 lines 13 - 28);

in a second charging method, taking measures resulting in dynamization (column 9 lines 63 – column 10 line 5 and column 10 lines 20 – 53). Heavey discloses wherein the constant voltage is applied and then a gas detection point is reached, which it is obvious that this gassing point dynamizes the battery.

Heavey discloses wherein in the second charging method, forcing discharges at predefined instants by one of switching on a predefined consumer and de-exciting a charging device (column 7 lines 10 – 37; column 10 lines 6 – 34).

Heavey discloses wherein the charge circuitry “settles down” which is obvious to be a de-excitation process. Heavey also discloses in column 7 lines 29 – 37 the loads are turned on and charging modes are changed.

**Regarding claim 2,** Heavey discloses wherein the battery is a lead acid battery in a motor vehicle that is charged via generator that is regulated to predefined voltages via a voltage regulator (abstract; figure 5A item 558; Column 5 lines 50 – 56).

**Regarding claim 4**, Heavey discloses wherein the consumer is a window heater.

Heavey discloses column 7 lines 29 – 37 wherein the loads may be different appliances within the vehicle. It is obvious that the load could be a window heater.

### ***Response to Arguments***

3. Applicant's arguments with respect to claims 1, 2, 4 - 15 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***
